EagleNet Registration

06/02/05 AMW

New for Fall 2005, every student computer connected to EagleNet on campus must undergo network registration. Installing the anti-virus software and software update patches provided on the CD given to freshmen at orientation will help ensure a smooth registration process.

EagleNet Registration is a web oriented scanning and registration process that was developed and integrated into the Juniata College Campus Network, EagleNet, over the Summer of 2005. This process will help to reduce the amount of virus traffic on the network as well as allow for better virus tracking. The goal is to have all non-Juniata owned computers and devices pass through the registration system, starting with on campus student housing areas in the Fall of 2005.

The registration system will be available through a web page when the computer is connected to a network port on campus. It will also be required for wireless connections in the Residence Halls. If you decide to use both a wired and wireless connection, you will need to complete registration for each connection.

Registration is required for all computers and devices that need access to the Internet and other Juniata network resources. While unregistered devices will still be able to access other unregistered devices, access to Juniata network resources and the Internet will not be available. There is also a higher chance of virus infection on the unregistered network.

Registration and scanning will be required at different times during the year starting with the beginning of every fall semester and after each break. At each of these points in time, computers requiring registration will not have access to EagleNet resources, including the Internet, until they are successfully registered.

If you are using a Microsoft Windows operating system, you will be required to have all Windows Updates installed and have an updated version of Symantec (Norton), McAfee, or Sophos installed for virus protection. One approved package, Symantec (Norton) Anti-Virus, is available from CTS at no cost to Juniata College students. Registration is a three step process that must be completed using Microsoft Internet Explorer.

If you are using a Mac or Linux computer and the registration system successfully determines your OS, links to updates will be provided and highly recommended, but will not be required.

If you have a computer or device that cannot complete the online registration process, it will need to be manually registered by contacting Campus Technology Services at 641-3619 (x3619 from on campus phones).

After completing EagleNet Registration, you will still need to follow instructions on configuring your computer's settings. The web page URLs to these instructions will be provided at the end of the Registration process; however, it may be helpful to print out the appropriate instructions before you arrive on campus. They are located on the CTS Information CD and also on the CTS Website at <http://services.juniata.edu/cts/network/connected.html> under Residence Hall Access.
