

Pennsylvania Junior Science and Humanities Symposium

SUNDAY, March 5–TUESDAY, March 7, 2023 | HUNTINGDON, PENNSYLVANIA

Applications

High school students who have done well in mathematics and science are eligible to apply. Although these students may still be undecided about their career choices, it is expected that they have completed a science or mathematics research project. For those who wish to present a paper, good public speaking skills are very helpful. Each form is required for all student presenters at PA-JSHS (feel free to make additional copies). To be considered for the 2023 symposium, each student must be accompanied by a teacher or parent. **BOTH** the student and their teacher/parent need to complete separate online registration forms — by **Wednesday, February 15th, 2023**. A complete student application must include an uploaded abstract, research paper, and statement of outside assistance by February 15th on the online registration application. See link to registration on the main page.

All teachers or parent chaperones must register themselves online. Teachers that have more than one student participating will only need to register themselves online once.

Each student application must have their abstract, research paper, and statement of outside assistance submitted by **Wednesday, February 15th, 2023** to be considered for the symposium. All documents must either be uploaded to the online registration or emailed to Kelsi Newman (newmank@juniata.edu) by the deadline.

Team Projects

Students should report on their individual contributions to research. If a student is part of a larger group, the presentation should focus on the individual contributions in the larger research project and properly acknowledge the contributions of other students, mentors, and/or teachers. For team research that cannot be divided into individual presentations, a team leader should be selected to present the results of the group work. In this case, all JSHS directives applying to the individual research investigations will apply to group research investigations. In the event that the group presenter of the winning regional group is unable to present at the national level, this opportunity will be passed on to the next ranking project. This decision is made since the judges' evaluations and scores pertain to the individual presenter. Student presenters who are part of a team must notify JSHS which student finalist will receive scholarship funding if the team presentation earns a regional or national award.
